NAME

ares_set_local_ip4 - Set local IPv4 address outgoing requests.

SYNOPSIS

#include <ares.h>

void ares_set_local_ip4(ares_channel channel, unsigned int local_ip)

DESCRIPTION

The <code>ares_set_local_ip4</code> function sets the IP address for outbound requests. This allows users to specify outbound interfaces when used on multi-homed systems.

SEE ALSO

 $ares_set_local_ip6(3)$

NOTES

This function was added in c-ares 1.7.4
